Headings separate different sections of the text and help in structuring the content. They should be clearly distinguishable and draw the reader's attention. Using different sizes and fonts for headings can aid in differentiating and hierarchically organizing information, thus enhancing readability. Properly chosen headings can improve the user experience in reading and comprehending the material.

# Body Text

The body text constitutes the majority of the content and should be readable and engaging. Choosing an appropriate font, size, and spacing for the body text can enhance readability and improve the reading experience. Using short paragraphs, proper spacing, and subheadings can help in breaking down and organizing information. The body text should be written in a way that allows the audience to easily grasp the main concepts and messages.

# Captions

Captions are brief descriptions added to images, charts, and tables to provide additional information and aid in better understanding the content. Captions should be concise and relevant, written in a way that quickly captures the reader's attention. Proper use of captions can enhance the visual message and increase audience engagement with the content.

# Lists

Lists are an efficient tool for organizing information in a concise and understandable manner. They can be presented as bullet points or numbered sequences, helping readers easily track key points. Using lists can improve the structure of the text, reduce complexity, and enhance readability. Lists are also very useful for emphasizing steps, components, or important items.
